

KOK Kitchens

Uber Direct Setup Guide

Adding fast courier delivery for extended-area orders

In short: your website already has Uber Direct delivery **built in** — it's just switched off until your Uber account is set up. Today, extended-area deliveries use a flat **£7.99** fee. Once Uber is connected, the site fetches a live quote at checkout and dispatches a courier automatically, with live tracking for the customer. The setup below is on your side (creating the Uber account); we wire it up once you send the credentials.

What is Uber Direct?

Uber Direct lets you offer on-demand delivery using Uber's driver network — but under **your** brand. Customers order on kokkitchens.com and an Uber courier collects and delivers; they never see Uber Eats. It's ideal for extended-area orders where your own delivery doesn't reach or doesn't scale.

What it costs

- Roughly **£3.50 – £6.50 per delivery** (distance-based). No monthly fee.
- Surge pricing may apply at peak times (busy evenings, bad weather).
- You decide what the customer pays — the site shows a live quote at checkout.

Step 1 — Sign up for Uber Direct

1. Go to **uber.com/gb/en/deliveries** (Uber Direct).
2. Choose **Get started** for a Direct business account, or contact Uber's sales team.
3. Provide your business details: **KOK Kitchens**, your Hertfordshire address, and a contact.

Note: unlike instant sign-ups, Uber Direct **API access usually involves an application / approval step**, so allow a few days for it to come through.

Step 2 — Get your API credentials

Once your Direct account is approved, in the **Uber Developer Dashboard** (developer.uber.com):

1. Create an application for KOK Kitchens.
2. Enable the **Deliveries** permission (scope `eats.deliveries`).
3. Note down these **three** values:
 - **Client ID**
 - **Client Secret**
 - **Customer ID** (your Direct organisation ID)

Step 3 — Send the credentials to us (securely)

Send these to Samuel via **WhatsApp** or **email** (samlawal@hotmail.com):

- Client ID
- Client Secret
- Customer ID

Important: treat the **Client Secret** like a password — never post it publicly or share it with anyone other than your Ophir Digital contact.

Step 4 — Confirm your pickup address

Couriers collect orders from one address. We currently have it set to:

10 Kendals Close, Radlett, WD7 8PQ

Let us know if couriers should collect from a different address.

What happens next

We connect Uber to the website (the integration is already built and ready), run a test delivery, and switch it on. From then, extended-area orders automatically get a **live courier quote** at checkout and a courier is **dispatched on order**, with **live tracking** for your customer — all under the KOK Kitchens brand.

You don't have to use Uber. The site works today on flat-rate self-delivery. Uber is an optional upgrade for reach and scale — a good fit as a hybrid: keep self-delivering nearby

postcodes, use Uber for the extended area. See the separate *Delivery Options Comparison* for the full picture.
